

Wuhan HTTX-H Insulating Boots (Gloves) Withstand Voltage Test Equipment **(Manual)**

I. Introduction

This equipment designed according the insulating boots (gloves) tests requirement and customers suggestions, solved the problem of non-standard tests, simplify the testing process, fast the testing speed. More reliably identify the insulated gloves (boots) leakage current, insulation aging, power frequency withstand voltage and other parameters. Protect workers' safety, is the ideal insulated gloves (boots) and special equipment. Its main features: three pairs of insulated gloves (boots) can be tested simultaneously, and can be read each leakage circuit, accurately determine unqualified insulated gloves (boots); bottom with roller can be moved.

II. Features

1. This device solved the non-standard tests of the traditional equipment.
2. Improve the efficiency, ensure the safety, it is the ideal equipment.

III. Parameters

Input voltage	AC220V 50Hz
Output voltage	0~30kV
Capacity	3kVA
Numbers	3 pairs each test
Weight	glove (boot) test bed : 80KG; Frequency voltage withstand test bed: 70KG

IV. Accessories

Control Console

Test Bed

Test Wire

Power Cord

Manual, Report, Certificate
